The progress of next-generation sequencing has a major impact on medical and genomic research. This high-throughput technology can now produce billions of short DNA or RNA fragments in excess of a few terabytes of data in a single run.

Big data: The next frontier for innovation, competition ...
The data centre building and its construction is unrivalled. From data suites of 20 racks to 800 rack data halls demanding 4MW+ of power, we meet any requirement with industry-leading quality and value. Data centre scalability is a key component of our solutions and we specialise in private data centre halls and custom data centre builds.

Next-generation Customer Analytics and Big Data
Finally, big data can be used to improve the development of the next generation of products and services. For instance, manufacturers are using data obtained from sensors embedded in products to create innovative after-sales service offerings such as proactive maintenance (preventive measures that take place before a failure occurs or is even noticed).
